

Question 1 | Correct Mark 1.00 out of 1.00

Given an array `nums` of size `n`, return *the majority element*.

The majority element is the element that appears more than $\lfloor n / 2 \rfloor$ times. You may assume that the majority element always exists in the array.

Example 1:

Input: `nums = [3,2,3]`

Output: 3

Example 2:

Input: `nums = [2,2,1,1,1,2,2]`

Output: 2

Constraints:

- `n == nums.length`
- `1 <= n <= 5 * 104`
- `-231 <= nums[i] <= 231 - 1`

For example:

Input	Result
3 3 2 3	3
7 2 2 1 1 1 2 2	2

Answer: (penalty regime: 0 %)

```

1  #include <stdio.h>
2
3  int majorityElement(int nums[], int n) {
4      int candidate = 0;
5      int count = 0;
6
7      for (int i = 0; i < n; i++) {
8          if (count == 0)
9              candidate = nums[i];
10
11             if (nums[i] == candidate)
12                 count++;
13             else
14                 count--;
15         }
16
17         return candidate;
18     }
19
20 int main() {
21     int n;
22     scanf("%d", &n);
23
24     int nums[n];
25
26     for (int i = 0; i < n; i++)
27         scanf("%d", &nums[i]);
28
29     printf("%d\n", majorityElement(nums, n));
30
31     return 0;
32 }
33

```

	Input	Expected	Got	
✓	3 3 2 3	3	3	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.
